EMISSIONS TRADING WORLDWIDE

The state of play of cap-and-trade in 2019

The ICAP ETS world map depicts emitations trading systems currently in force, scheduled or under consideration. There are now 20 systems covering 27 jurisdictions with an ETS in force. Another six jurisdictions are putting in place their systems that could be operating in the next few years, including China and Masico. 12 jurisdictions are also considering the role an ETS can play in their climate change policy mix, including Chie, Thailand and Vietnam.

A regularly updated, interactive version of the ICAP ETS map with detailed information on all systems is available at: www.icapcarbonaction.com/ets-map

CARBON DIOXIDE PRICES EVOLUTION (PER TON)

Since Paris agreement in 2015, 175 countries are planning to develop a carbon dioxide free planet, implementing the so called "carbon pricing systems", which means that the entire process is due to become mandatory by law.

The price per CO2 ton is actually estimated in approximately \$5, while the High Committee for the Carbon Pricing has stated the necessary price level to comply with the Paris agreement in \$40 by 2021, up to \$100 by 2030

Climate Blockchain Initiatives (CBI) is a spanish company with a global approach born to disrupt the new Climate markets by providing new technologies and solutions to meet corporations and citizens carbon offsetting needs, and sustainable efforts.

We work for large Corporations and entities, providing access to our **ClimateTrade** platform. Clients can directly offset their carbon footprint by selecting the desired credits from the ones offered, granting them access to a record of all transactions, in their private account.

disruptive projects against Climate Change aligned with the SDGs

🍰 climate**trade**

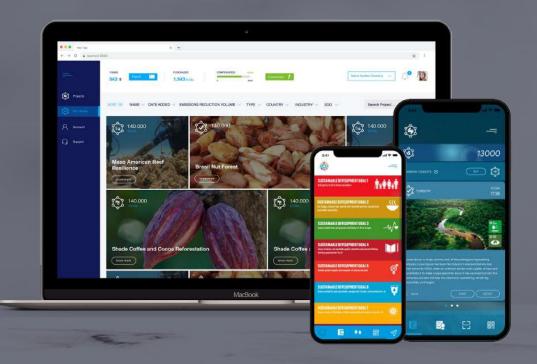

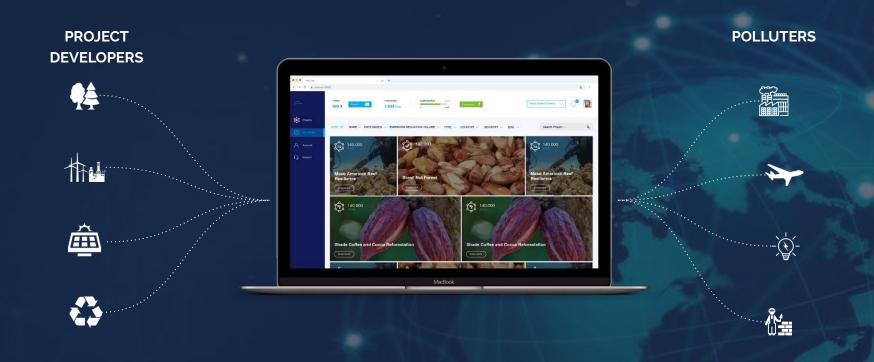

We use blockchain technology and have created our platform following the instructions of the World Bank and United Nations, aligned with what has been established for the New Climate Markets Post 2020.

We are founding members of Climate Chain Coalition, the Blockchain Organization against Climate Change of UNFCCC (United Nations Framework Convention for Climate Change).

HOW CLIMATETRADE WORKS

CLIMATETRADE

P2P TRACEABILITY

NO INTERMEDIARIES

COSTS REDUCTION

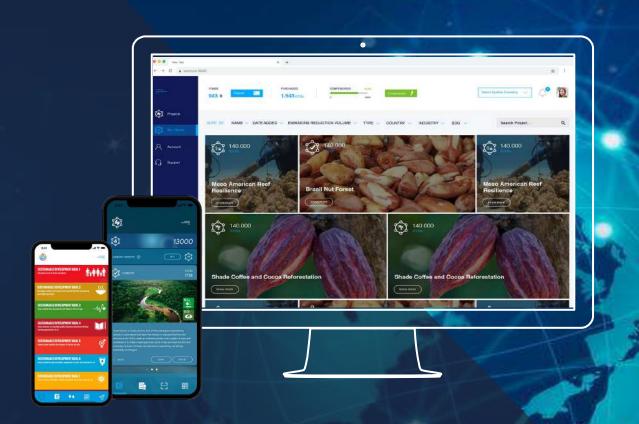

TOTALLY AUTOMATIC

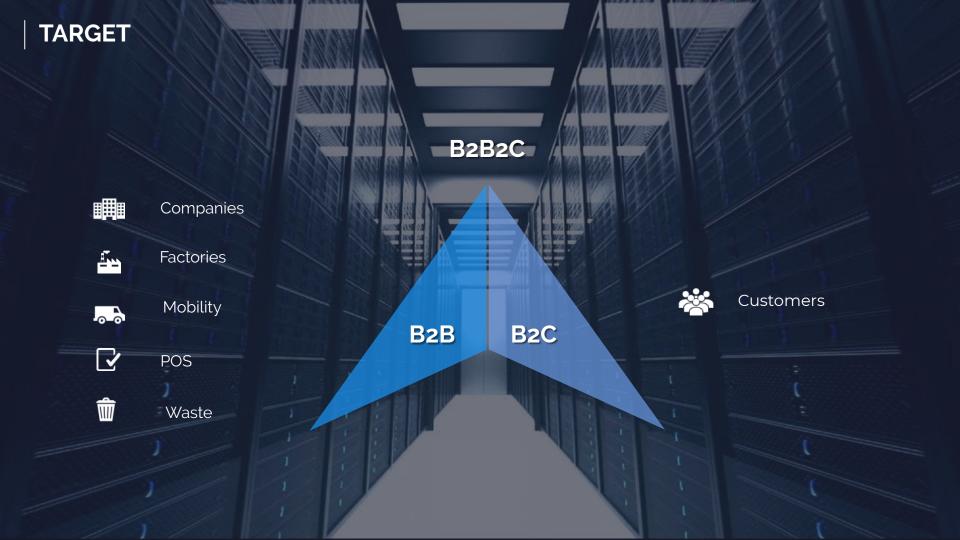

RIGHT PRICE

USER EXPERIENCE

CBI also develops, together with corporations worldwide, high-level Impact campaigns for their customers, complementing and helping to make their B2C channel more sustainable for their consumers, using CSR / Climate-related / offsetting actions

To achieve this, our company has created a technology infrastructure that permits consumers, corporations, and Governments to offset their carbon footprint through a peer to peer (p2p) transaction, that is, without intermediaries.

In this way Project Developers (carbon credits originators) are able to monetize their efforts and receive the right price in real time, without paperwork and with less bureaucracy. Also, due to this decentralization, the offset purchasers will be content with their purchase, knowing that the developers have received the right price and that consequently, the Climate action is taking place. All with a unique, User Experience (UX).

CURRENT SITUATION

The world's richest institutions invest in fossil fuels. Activists are changing that.

Divestment is one of the fastest-growing movements in the fight against climate change. It's only getting started.
